

# MATERIALS AND SYSTEMS FOR GLAZING IN THE AUTOMOTIVE INDUSTRY

## Advantages of glass encapsulation with high density polyurethane (PUR RIM)

- A single piece, incorporating glass, weatherstripping and a dividing bar.
- High level of acoustic insulation and a hermetic seal.
- Reduces components and installation time.
- Polyurethane is a better thermal insulator and does not present heating problems like PVC.
- Less problems due to degassing.
- Less susceptible to microbiological attack and weathering compared to rubber materials (TPE, EPDM).
- Better thermal and chemical resistance.

## Benefits of the product

## A sustainable solution:
